Self-Clinching Nuts for Flush Installation

Captive Series CFL Stainless steel Flush Nuts provide load bearing threads in materials as thin as .060 in. thick. They are available in both inch and metric thread sizes and are easily pressed into a round hole, resulting in a smooth surface on both sides of the sheet material with improved strength.

Captive Flush Nuts may also be installed in sheet metal prior to bending, providing durable threads in areas that would be impossible to access after forming. The hexagon head shape and undercut also provide high torque-out and push-out resistance.

Typical applications include sliding approaches or where no protrusions are allowed, such as securing LED modules in emergency vehicle light bar assemblies.

Captive manufactures a wide range of self-clinching fasteners and has a world-wide sales and distribution network.
