Collar Base Self-Clinching Panel Fasteners for Rack Mounted Modules

Captive Series PS Self-Clinching Panel Fasteners provide permanent attachment of captive screw assemblies to the front panels of removable rack modules.

The preassembled panel fasteners consist of a carbon steel base with stainless steel screw and aluminum knob, which are available in a range of inch and metric thread sizes.

The head style is available in a knurled or smooth version, which allows the fastener to be tightened by hand or cross recess screwdriver. The spring-loaded screw projects outward, acting as a flag when unfastened and provides a low profile when secure. The base design has a collar that provides a mechanical stop when installed in the panel.

Captive manufactures a wide range of self-clinching fasteners and has a world-wide sales and distribution network.
