Self-Clinching Panel Fasteners for Rack Mounted Modules

Captive Self-Clinching Panel Fasteners provide permanent attachment of screw assemblies to the front panels of removable rack modules.

The preassembled screws are made of carbon steel (Series LPH) and Stainless Steel (Series CPFC2), which are available in a range of inch and metric thread sizes.

The knurled head style allows the fastener to be tightened by hand or slotted screwdriver. The spring-loaded screw projects outward, acting as a flag when unfastened.

Captive manufactures a wide range of self-clinching fasteners and has a world-wide sales and distribution network.
